Nuclear Reactors Built, Being Built, or Planned in the United States as of Dec. 31, 1981

ABOUT THE TECHNICAL INFORMATION CENTER

The Technical Information Center in Oak Ridge, Tennessee, has been the national center for scientific and technical information for the Department of Energy (DOE) and its predecessor agencies since 1946. In developing and managing DOE's technical information program, the Center places under bibliographic control not only DOE-originated information but also worldwide literature on scientific and technical advances in the energy field and announces the source and availability of this information. Whereas the literature of science is emphasized, coverage is extended to DOE programmatic, socioeconomic, environmental, legislative/regulatory energy analysis, and policy-related areas. To accomplish this mission, the Center builds and maintains computerized energy-information data bases and disseminates this information via computerized retrieval systems and announcement publications such as abstracting journals, bibliographies, and update journals. Direct access to the Center's most comprehensive data base, the Energy Data Base, is available to the public through commercial on-line bibliographic retrieval systems. The Energy Data Base and many of the Center's energy-related data bases are available to DOE offices and contractors and to other government agencies via DOE/RECON, the Department's on-line information retrieval system. The Center has developed and maintains systems to record and communicate energy-related research-in-progress information, to catalog official DOE issue-and-policy documents, to maintain a register of DOE public communications publications, to track research report deliverables from DOE contractors, and to test and make available DOE-funded computer software programs with scientific and management applications. The Center also maintains a full-scale publishing capability to serve special publication needs of the Department. To effectively manage DOE's technical information resources, the Center's program is one of continual development and evaluation of new information products, systems, and technologies.

Nuclear Reactors Built, Being Built, or Planned contains unclassified information about facilities built, being built, or planned in the United States for domestic use or export as of Dec. 31, 1981, which are capable of sustaining a nuclear chain reaction. The Technical Information Center, U. S. Department of Energy, gathers this information semiannually from Washington headquarters and field offices of DOE; from the U. S. Nuclear Regulatory Commission; from the U. S. reactor manufacturers who are the principal nuclear contractors for foreign reactor locations; and from U. S. embassies of foreign countries.

Information is presented in five parts, each of which is categorized by primary function or purpose: civilian, military, production, export, and critical assembly facilities. Various classes of reactors within these categories are defined as follows:

CENTRAL-STATION NUCLEAR POWER PLANT: A facility designed and constructed for operation on a utility system. (Part I, Sec. 1A)

DUAL-PURPOSE PLANT: A nuclear power facility designed, constructed, and operated for more than one primary purpose; for example, the production of nuclear materials and the generation of electricity or the use of reactor thermal energy for electrical generation and process-heat applications including desalting. (Part I, Sec. 1B)

EXPERIMENTAL POWER REACTOR: A facility designed, engineered, constructed, and operated to test the technical feasibility of a concept or to provide the technical basis for a similar type nuclear power plant in a larger size. Design flexibility permits changes to prove out various aspects of reactor technology including fuel and other components. Power-conversion equipment may or may not be included as part of the facility. (Part I, Sec. 2A)

GENERAL IRRADIATION TEST REACTOR: A reactor having (1) a thermal power level exceeding 10 MW; (2) test loops or experimental facilities within, or in proximity to, the core; and (3) the use of nuclear radiation for testing the life or performance of reactor components as its major function. (Part I, Sec. 3A, and Part IV, Sec. 2A)

HIGH-POWER RESEARCH AND TEST REACTOR: A reactor having a relatively high thermal power level (5 MW or more) but not classed as a general irradiation test reactor. (Part I, Sec. 3B)

SAFETY RESEARCH AND TEST REACTOR: A reactor associated with a nuclear safety research or engineering-scale test program conducted for the purpose of developing basic design information or demonstrating safety characteristics of terrestrial and aerospace nuclear reactor systems. (Part I, Sec. 3C)

RESEARCH REACTOR: A reactor—excluding that located at a university—whose nuclear radiations are used primarily as a research tool for basic or applied research and whose thermal power level is less than 5 MW. It may include facilities for testing reactor materials. (Part I, Sec. 3D; Part III, Sec. 3B; and Part IV, Sec. 2B)

Revisions of this report are published twice a year; the information presented is current as of June 30 or December 31.

Nuclear Reactors Built, Being Built, or Planned contains unclassified information about facilities built, being built, or planned in the United States for domestic use or export as of Dec. 31, 1981, which are capable of sustaining a nuclear chain reaction. The Technical Information Center, U. S. Department of Energy, gathers this information semiannually from Washington headquarters and field offices of DOE; from the U. S. Nuclear Regulatory Commission; from the U. S. reactor manufacturers who are the principal nuclear contractors for foreign reactor locations; and from U. S. embassies of foreign countries.

Information is presented in five parts, each of which is categorized by primary function or purpose: civilian, military, production, export, and critical assembly facilities. Various classes of reactors within these categories are defined as follows:

CENTRAL-STATION NUCLEAR POWER PLANT: A facility designed and constructed for operation on a utility system. (Part I, Sec. 1A)

DUAL-PURPOSE PLANT: A nuclear power facility designed, constructed, and operated for more than one primary purpose; for example, the production of nuclear materials and the generation of electricity or the use of reactor thermal energy for electrical generation and process-heat applications including desalting. (Part I, Sec. 1B)

EXPERIMENTAL POWER REACTOR: A facility designed, engineered, constructed, and operated to test the technical feasibility of a concept or to provide the technical basis for a similar type nuclear power plant in a larger size. Design flexibility permits changes to prove out various aspects of reactor technology including fuel and other components. Power-conversion equipment may or may not be included as part of the facility. (Part I, Sec. 2A)

GENERAL IRRADIATION TEST REACTOR: A reactor having (1) a thermal power level exceeding 10 MW; (2) test loops or experimental facilities within, or in proximity to, the core; and (3) the use of nuclear radiation for testing the life or performance of reactor components as its major function. (Part I, Sec. 3A, and Part IV, Sec. 2A)

HIGH-POWER RESEARCH AND TEST REACTOR: A reactor having a relatively high thermal power level (5 MW or more) but not classed as a general irradiation test reactor. (Part I, Sec. 3B)

SAFETY RESEARCH AND TEST REACTOR: A reactor associated with a nuclear safety research or engineering-scale test program conducted for the purpose of developing basic design information or demonstrating safety characteristics of terrestrial and aerospace nuclear reactor systems. (Part I, Sec. 3C)

RESEARCH REACTOR: A reactor—excluding that located at a university—whose nuclear radiations are used primarily as a research tool for basic or applied research and whose thermal power level is less than 5 MW. It may include facilities for testing reactor materials. (Part I, Sec. 3D; Part III, Sec. 3B; and Part IV, Sec. 2B)

UNIVERSITY RESEARCH AND TEACHING REACTOR: A reactor located at a university and usually operated for the primary purpose of training in the operation and utilization of reactors and for instruction in reactor theory and performance. (Part I, Sec. 3E, and Part IV, Sec. 2C)

SPECIAL TEST REACTOR: A reactor designed for special testing purposes. (Part III, Sec. 3A)

CRITICAL FACILITY: A reactor capable of sustaining a nuclear chain reaction operating at extremely low power (a few watts) and designed to determine a critical mass, neutron-flux distribution, and other characteristics of a flexible arrangement of nuclear fuel, construction materials, coolant, and other reactor components. Fluid critical facilities are used to explore the critical masses of various concentrations of solutions in differing geometries. Metal critical assemblies are used to investigate the variations in heterogeneous cores. The tabulation of these facilities in Part V (pp. 36-37) excludes those which have been operated and subsequently dismantled.

The abbreviated listings in the principal nuclear contractor column refer to the technical organization assigned primary responsibility for design and/or fabrication of the reactor system. The spelled-out forms for those abbreviations as well as those for designers, shipbuilders, and facility operators, are given in the table on page 12.

Startup dates refer to the year of first criticality. Estimated startup dates based on the best available information are included for projects not yet in service. The dates for non-DOE projects are estimates announced by the sponsoring organizations. Years of initial commercial operation for power reactors are given in the tabulation on pages 6 to 11.

Reactors are listed as being *operable* under the following circumstances:

1. Federal Government reactors [other than those of the Tennessee Valley Authority which are licensed by the Nuclear Regulatory Commission (NRC) and are treated in accordance with item 2]—when criticality is achieved.
2. Non-Federal Government reactors in the United States—an operating license is issued by the NRC.
3. Reactors for foreign locations—when criticality is achieved.

Reactors are listed as *being built* under the following circumstances:

1. Federal Government reactors (other than those of the Tennessee Valley Authority which are licensed by NRC and are treated in accordance with item 2)—when ground is broken, components are ordered, or construction contract is awarded.
2. Non-Federal Government reactors in the United States—when a construction permit or limited work authorization is issued by NRC.
3. Reactors for foreign locations—when an application for an export license is received by NRC or when reliable information is received relating to the fabrication of reactor components.

Reactors are listed as being *planned* under the following circumstances:

1. Federal Government reactors—when publicly announced as a project planned for construction by the agency involved or the project is otherwise appropriately authorized.
2. Non-Federal Government reactors in the United States—when a public announcement that includes the principal vendor supplier is made by the sponsoring organization or an application for a construction permit is received by NRC.
3. Reactors for foreign locations—when public announcement that includes principal contractor and reactor type is made or when NRC receives information that a U. S. reactor manufacturer is proceeding with preconstruction design and development on the basis of a letter of intent.

Reactors are listed as *shut down* or *dismantled* when the owner announces or verifies a decision to permanently shut down a facility and does not intend to restart the reactor. A reactor shut down owing to technical problems, extensive modifications, or refueling continues to be listed as *operable*.

The statistical summary on the following page summarizes the number of reactors in every category except critical facilities. Shutdown and dismantled reactors in these categories are included since such facilities have made significant contributions to reactor technology.

STATISTICAL SUMMARY

	Operable	Being built	Planned	Shut down or dismantled

Abstract

This semiannual compilation provides current information about facilities for domestic use or export which are capable of sustaining a nuclear chain reaction. Civilian, production, and military reactors are listed, as are reactors for export and critical assembly facilities. Information given includes location, owner, principal nuclear contractor, type, power rating, docket number, and start-up and shutdown dates. *Nuclear Reactors Built, Being Built, or Planned* is also available on standing order (PB82-903000) through a deposit account with the National Technical Information Service, Springfield, Va. 22161.

Contents

- 3 Statistical Summary
- 6 Map of the U. S. Commercial Nuclear Power Reactors in Operation and a Listing of These Facilities by State
- 12 List of Contractors, Designers, Shipbuilders, and Facility Operators for Which Abbreviations Appear in Tables

Civilian Reactors (Domestic)

- 13 Power Reactors
 - 13 Central-Station Electric Power
 - 18 Dual-Purpose Plants
 - 19 Propulsion (Maritime)
- 20 Experimental Electric Power
 - 20 Electric-Power Systems
 - 20 Auxiliary Power (SNAP)
 - 20 Space Propulsion (Rover)
- 21 Test, Research, and University Reactors
 - 21 General Irradiation Test
 - 22 High-Power Research and Test
 - 22 Safety Research and Test
 - 23 General Research
 - 25 University Research and Teaching

Production Reactors

- 27 Materials Production
- 27 Process Development

Military Reactors

- 28 Defense Power-Reactor Applications
 - 28 Remote-Station Power
 - 28 Propulsion (Naval)
- 30 Developmental Power
 - 30 Electric-Power Experiments and Prototypes
 - 30 Propulsion Experiments and Prototypes
- 31 Test and Research
 - 31 Test Reactors
 - 31 Research Reactors

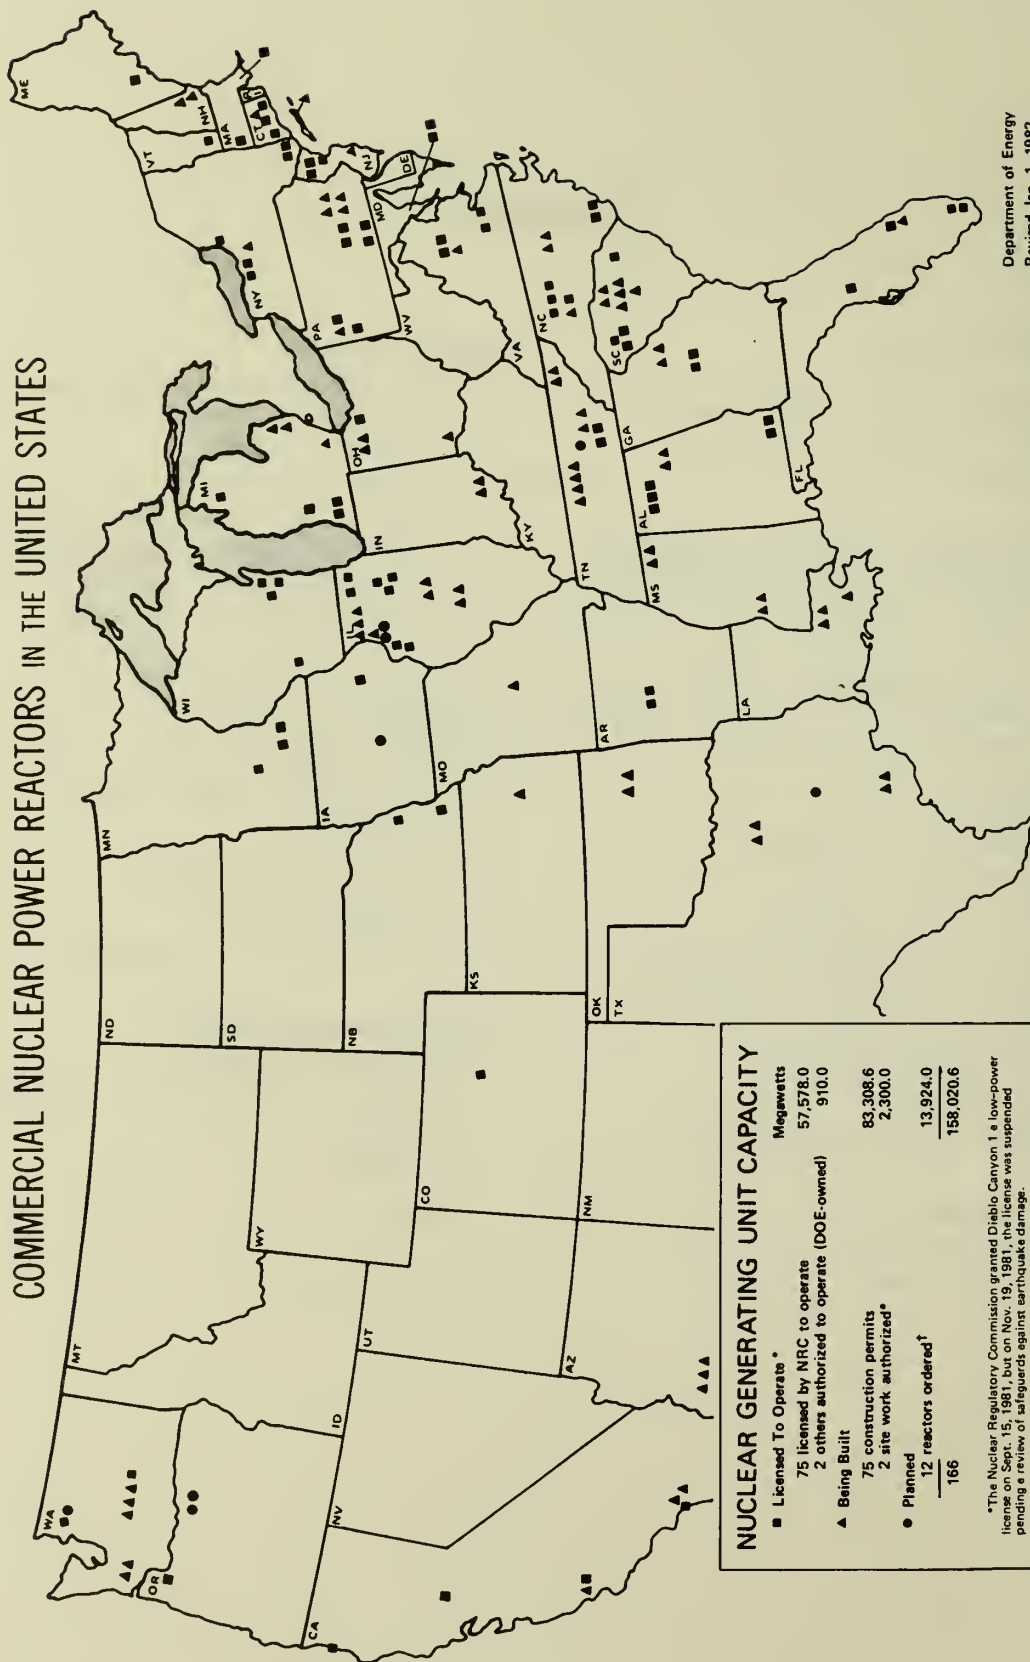

Reactors for Export

- 32 Power Reactors
 - 32 Central-Station Electric Power
 - 34 Propulsion
- 34 Test, Research, and Teaching
 - 34 General Irradiation Test
 - 34 General Research
 - 35 University Research and Teaching

Critical Assembly Facilities

- 36 Identification of Facilities
- 37 Identification of Experiments and Studies
 - 37 Civilian
 - 37 Military
- 38 Footnotes
- 41 Reactor Index

COMMERCIAL NUCLEAR POWER REACTORS IN THE UNITED STATES

NUCLEAR GENERATING UNIT CAPACITY

	Megawatts
■ Licensed To Operate*	
75 licensed by NRC to operate	57,578.0
2 others authorized to operate (DOE-owned)	910.0
▲ Being Built	
75 construction permits	83,308.6
2 site work authorized*	2,300.0
● Planned	
12 reactors ordered†	13,924.0
	<u>158,020.6</u>
	166

*The Nuclear Regulatory Commission granted Diablo Canyon 1 a low-power license on Sept. 15, 1981, but on Nov. 19, 1981, the license was suspended pending a review of safeguards against earthquake damage.

There are no symbols for units planned but not sited.
Because of space limitations, symbols do not reflect precise locations.

LIST OF CONTRACTORS, DESIGNERS, SHIPBUILDERS, AND FACILITY OPERATORS FOR WHICH ABBREVIATIONS APPEAR IN TABLES

AC	Allis-Chalmers Mfg. Co.	HA	Hittman Associates
ACF	ACF Industries, Inc. (reactor activities absorbed by AC)	HEDL	Hanford Engineering Development Laboratory
AG	Aerojet-General Corporation	HKF	H. K. Ferguson Co.
AGN	Aerojet-General Nuclear, formerly a subsidiary and now a division of Aerojet-General Corporation	Hughes	Hughes Aircraft Co.
AI	Atomics International, a division of Rockwell International	IC	Internuclear Co.
Alco	Alco Products, Inc. (reactor activities absorbed by AC)	INC	Idaho Nuclear Corporation
AMF	AMF Atomics, Inc., a division of American Machine & Foundry Co.	INEL	Idaho National Engineering Laboratory
ANL	Argonne National Laboratory, operated by the University of Chicago	Ingalls	Ingalls Shipbuilding Corp.
ANPD	Aircraft Nuclear Propulsion Department, General Electric Company (name changed to Flight Propulsion Laboratory Department)	Kaman	Kaman Nuclear, a division of Kaman Aircraft Corp.
AS Inc.	American Standard Inc.	KAPL	Knolls Atomic Power Laboratory, operated by General Electric Company
AU, Inc.	Associated Universities, Inc. (Brookhaven National Laboratory)	KE	Kaiser Engineers, a division of Henry J. Kaiser Co.
BAC	Bendix Aviation Corp.	LANL	Los Alamos National Laboratory, operated by the University of California
Bethlehem	Shipbuilding Division, Bethlehem Steel Co. (now Quincy Division, General Dynamics Corp.)	LLNL	Lawrence Livermore National Laboratory, operated by the University of California
Bettis	Bettis Atomic Power Laboratory, operated by Westinghouse Electric Corporation	Lockheed	Lockheed Aircraft Corp.
Blaw-Knox	Blaw-Knox Co.	Mare Island	Mare Island Naval Shipyard
B&R	Burns & Roe, Inc.	Martin	Martin Marietta Corp.
B&W	Babcock & Wilcox Co.	Maxon	Maxon Construction Co.
CL	Clinton Laboratory of the Manhattan Engineer District	Met. Lab	Metallurgical Laboratory of the Manhattan Engineer District
Comb.	Combustion Engineering, Inc.	NASA	National Aeronautics and Space Administration
Convair	Convair Division, General Dynamics Corp.	NBS	National Bureau of Standards
Cook	Nucledyne Co., a division of Cook Electric Company	Newport News	Newport News Shipbuilding & Dry Dock Co.
CW	Curtiss-Wright Corporation	NRDS	Nuclear Rocket Development Station
Daystrom	Daystrom, Inc.	NRL	Naval Research Laboratory
DOD	Department of Defense	NSA	Nuclear Systems Associates
DOE	Department of Energy	NTS	Nevada Test Site
Du Pont	E. I. Du Pont de Nemours & Company, Inc.	NYSC	New York Shipbuilding Corp.
Ebasco	Ebasco Services, Inc.	ORNL	Oak Ridge National Laboratory
EG&G-ID	EG&G Idaho, Inc. (a division of EG&G, Inc.)	PNL	Pacific Northwest Laboratory, operated by Battelle Memorial Institute
Electric Boat	Electric Boat Division, General Dynamics Corp.	Portsmouth	Portsmouth Naval Shipyard
Fluor	The Fluor Corporation, Ltd.	PPC	Phillips Petroleum Co.
Framatome	Framatome	PRDC	Power Reactor Development Company
FW	Foster Wheeler Corp.	P&W	Pratt & Whitney Aircraft Division, United Aircraft Corp.
GA	General Atomic, a Gulf and Royal Dutch/Shell Company	RI	Rockwell International
GD (Quincy)	Quincy Division, General Dynamics Corp.	Sandia	Sandia National Laboratories, operated by Sandia Corp., a subsidiary of Western Electric Co.
GE	General Electric Company	San Francisco	San Francisco Bay Naval Shipyard
GENMPO	General Electric Nuclear Materials and Propulsion Operation	Bay	
GM	General Motors Corp.	TVA	Tennessee Valley Authority
GNEC	General Nuclear Engineering Corp. (became a division of Combustion Engineering, Inc., in 1964)	UNC	United Nuclear Corporation, Development Division
GSA	General Services Administration	UNCNI	UNC Nuclear Industries
		West.	Westinghouse Electric Corporation

OPERABLE						
Arkansas Nuclear One, Unit 1 (Arkansas Power & Light Co.) [50-313] ³	Russellville, Ark.	B & W	Pressurized water	850	2568	1974
Arkansas Nuclear One, Unit 2 (Arkansas Power & Light Co.) [50-368] ³	Russellville, Ark.	Comb.	Pressurized water	912	2815	1978
Beaver Valley Power Station, Unit 1 (Duquesne Light Co., Ohio Edison Co., and Pennsylvania Power Co.) [50-334] ³	Shippingport, Pa.	West.	Pressurized water	852	2660	1976
Big Rock Point Nuclear Plant (Consumers Power Co.) [50-155] ^{3,4}	Big Rock Point, Mich.	GE	Boiling water	72	240	1962
Browns Ferry Nuclear Power Station, Unit 1 (Tennessee Valley Authority) [50-259] ³	Decatur, Ala.	GE	Boiling water	1065	3293	1973
Browns Ferry Nuclear Power Station, Unit 2 (Tennessee Valley Authority) [50-260] ³	Decatur, Ala.	GE	Boiling water	1065	3293	1974
Browns Ferry Nuclear Power Station, Unit 3 (Tennessee Valley Authority) [50-296] ³	Decatur, Ala.	GE	Boiling water	1065	3293	1976
Brunswick Steam Electric Plant, Unit 1 (Carolina Power & Light Co.) [50-324] ³	Southport, N. C.	GE	Boiling water	821	2436	1976
Brunswick Steam Electric Plant, Unit 2 (Carolina Power & Light Co.) [50-325] ³	Southport, N. C.	GE	Boiling water	821	2436	1975
Calvert Cliffs Nuclear Power Plant, Unit 1 (Baltimore Gas & Electric Co.) [50-317] ³	Lusby, Md.	Comb.	Pressurized water	845	2700	1974
Calvert Cliffs Nuclear Power Plant, Unit 2 (Baltimore Gas & Electric Co.) [50-318] ³	Lusby, Md.	Comb.	Pressurized water	845	2700	1976
Cooper Nuclear Station (Nebraska Public Power District and Iowa Power and Light Co.) [50-298] ³	Brownville, Nebr.	GE	Boiling water	778	2381	1974
Crystal River Nuclear Plant, Unit 3 (Florida Power Corp.) [50-302] ³	Red Level, Fla.	B & W	Pressurized water	825	2544	1977
Davis-Besse Nuclear Power Station, Unit 1 (Toledo Edison Co. and Cleveland Electric Illuminating Co.) [50-346] ³	Oak Harbor, Ohio	B & W	Pressurized water	906	2772	1977
Donald C. Cook Nuclear Power Plant, Unit 1 (Indiana and Michigan Electric Co.) [50-315] ³	Bridgman, Mich.	West.	Pressurized water	1054	3250	1975
Donald C. Cook Nuclear Power Plant, Unit 2 (Indiana and Michigan Electric Co.) [50-316] ³	Bridgman, Mich.	West.	Pressurized water	1100	3391	1978
*Dresden Nuclear Power Station, Unit 1 (Commonwealth Edison Co.) [50-010] ³	Morris, Ill.	GE	Boiling water	200	700	1959
Dresden Nuclear Power Station, Unit 2 (Commonwealth Edison Co.) [50-237] ³	Morris, Ill.	GE	Boiling water	794	2527	1970
Dresden Nuclear Power Station, Unit 3 (Commonwealth Edison Co.) [50-249] ³	Morris, Ill.	GE	Boiling water	794	2527	1971
Duane Arnold Energy Center, Unit 1 (Iowa Electric Light & Power Co., Central Iowa Power Cooperative, and Corn Belt Power Cooperative) [50-331] ³	Palo, Iowa	GE	Boiling water	538	1658	1974
Edwin I. Hatch Nuclear Plant, Unit 1 (Georgia Power Co.) [50-321] ³	Baxley, Ga.	GE	Boiling water	777	2436	1974
Edwin I. Hatch Nuclear Plant, Unit 2 (Georgia Power Co.) [50-366] ³	Baxley, Ga.	GE	Boiling water	784	2436	1978
Fort Calhoun Station, Unit 1 (Omaha Public Power District) [50-285] ³	Fort Calhoun, Nebr.	Comb.	Pressurized water	478	1500	1973
Fort St. Vrain Nuclear Generating Station (Public Service Co. of Colorado) [50-267] ^{3,4}	Platteville, Colo.	GA	High temperature	330	842	1974
Haddam Neck Plant (Connecticut Yankee Atomic Power Co.) [50-213] ^{3,4}	Haddam Neck, Conn.	West.	Pressurized water	580	1825	1967
H. B. Robinson Plant, Unit 2 (Carolina Power & Light Co.) [50-261] ³	Hartsville, S. C.	West.	Pressurized water	700	2300	1970
†Humboldt Bay Power Plant, Unit 3 (Pacific Gas & Electric Co.) [50-133] ³	Eureka, Calif.	GE	Boiling water	65	242	1963
Indian Point Station, Unit 2 (Consolidated Edison Co. of New York, Inc.) [50-247] ³	Buchanan, N. Y.	West.	Pressurized water	873	2758	1973
Indian Point Station, Unit 3 (Power Authority of New York) [50-286] ³	Buchanan, N. Y.	West.	Pressurized water	965	3025	1976
James A. FitzPatrick Nuclear Power Plant (Power Authority of the State of New York) [50-333] ³	Scriba, N. Y.	GE	Boiling water	821	2436	1974

*Shut down for upgrading of emergency core-cooling system and for chemical cleaning. Outage expected to last through mid-1986.

[†]Shut down pending decision on future operation.

2. DEVELOPMENTAL POWER

A. Electric-Power Experiments and Prototypes

Name (all owned by DOE)	Designation ⁵⁷	Location	Principal nuclear contractor	Type	Power, ¹ Plant, net kW(e)	Reactor, kW(t)	Start-up	Shut-down
SHUT DOWN OR DISMANTLED								
Gas Cooled Reactor Experiment	GCRE	INEL Site, Idaho	AGN	Gas cooled, light water moderated	No elec.	2,200	1960	1962
Mobile Low Power Plant No. 1	ML-1	INEL Site, Idaho	AGN	Gas cooled, light water moderated	300	3,300	1961	1965
Stationary Low Power Plant No. 1	SL-1	INEL Site, Idaho	ANL	Boiling water	300	2,200	1958	1961

B. Propulsion Experiments and Prototypes

Name (all owned by DOE)	Designation	Location	Principal nuclear contractor	Type	Power, ¹ kW(t)	Start-up	Shut-down
OPERABLE							
Destroyer Reactor Prototype	DIG	West Milton, N. Y.	GE	Pressurized water		1962	
Large Ship Reactor Prototype (2 reactors)	AIW	INEL Site, Idaho	West.	Pressurized water		1958	
Modifications and Additions to Reactor Facility	MARF	West Milton, N. Y.	GE	Pressurized water		1976	
Natural Circulation Test Plant	S5G	INEL Site, Idaho	West.	Pressurized water		1965	
Small Submarine Reactor Prototype	SIC	Windsor, Conn.	GE	Pressurized water		1959	
S1W Reactor Facility	S1W	INEL Site, Idaho	West.	Pressurized water		1953	
Submarine Advanced Reactor Prototype	S3G	West Milton, N. Y.	GE	Pressurized water		1958	
Trident Prototype	S8G	West Milton, N. Y.	GE	Pressurized water		1978	

SHUT DOWN OR DISMANTLED

Aircraft Reactor Experiment	ARE	Oak Ridge, Tenn.	ORNL	Molten salt	1,500	1954	1954
Experimental Propulsion Test Reactor	TORY IIA	NTS, Nev.	LLNL	Air cooled	150,000	1960	1961
Experimental Propulsion Test Reactor ⁶⁴	TORY IIC	NTS, Nev.	LLNL	Air cooled	600,000	1964	1964
Heat Transfer Reactor Experiment No. 1	HTRE-1	INEL Site, Idaho	ANPD	Air cooled	20,000	1956	1957
Heat Transfer Reactor Experiment No. 2	HTRE-2	INEL Site, Idaho	ANPD	Air cooled	14,000	1957	1961
Heat Transfer Reactor Experiment No. 3	HTRE-3	INEL Site, Idaho	ANPD	Air cooled	32,000	1958	1961
Submarine Intermediate Reactor Mark A	SIG	West Milton, N. Y.	GE	Sodium		1955	1957

3. TEST AND RESEARCH

A. Test

Name and/or owner	Designation	Location	Principal nuclear contractor	Type	Power, ¹ kW(t)	Start-up	Shut-down
Aerospace Systems Test Reactor (USAF)	ASTR	Fort Worth, Tex.	Convair	Light water	10,000	1954	1971
Ground Test Reactor (USAF)	GTR	Fort Worth, Tex.	Convair	Pool	10,000	1953	1973
Nuclear Engineering Test Reactor (USAF)	NETR	Dayton, Ohio	Maxon-AC	Tank	10,000	1965	1970

SHUT DOWN OR DISMANTLED

B. Research

OPERABLE

Aberdeen Pulsed Reactor Facility (Ballistic Research Laboratories, USA)	APRF	Aberdeen, Md.	UNC	Bare, fast, prompt burst	10	1968	
Armed Forces Radiobiology Research Institute (DNA, DOD) ^{3,30}	AFRRI	Bethesda, Md.	GA	TRIGA-Mk F	1,000	1962	
Fast Burst Reactor Facility (Army Missile Test and Evaluation Directorate, USA)	FBRF	White Sands, N. Mex.	Kaman	Bare, fast, prompt burst	10	1964	
Thermal Test Reactor No. 1 (DOE)	TTR-1	Schenectady, N. Y.	KAPL	Graphite	10	1951	

SHUT DOWN OR DISMANTLED

Army Materials Research Reactor (Army Materials and Mechanics Research Center, USA) ³	AMRR	Watertown, Mass.	BAC	Pool	5,000	1960	1970
Diamond Ordnance Radiation Facility (Harry Diamond Laboratories, USA) ³⁰	DORF	Forest Glen, Md.	GA	TRIGA-Mk F	250	1961	1977
Naval Research Reactor (USN) ³	NRR	Washington, D. C.	NRL	Pool	1,000	1956	1970
Nuclear Effects Reactor (DOE)	Super KUKLA	NTS, Nev.	LLNL	Prompt burst	Transient	1964	1979
Walter Reed Research Reactor (Walter Reed Army Institute of Research, USA) ³	WRRR	Washington, D. C.	AI	Homogeneous	50	1962	1970

RFP-NFS	Critical-configuration safety tests	Vertical	1965
RFP-NFS	Critical-configuration safety tests	Solution	1965
RFP-NFS	Critical-configuration safety tests	Tank	1965

1. Power-capacity figures are based on the best available information. In all instances thermal capacity of the nuclear reactor is given; the electrical output, when shown, is the net electrical capacity of the power plant. Where a plant has a stretch capacity, the initial capacity is given until the stretch value is approved.
2. The first core for the Shippingport station began power operation in 1957, with a capacity rating of 60 MW(e). The second core began power operation in 1965, with a capacity rating of 90 MW(e), and operated until its shutdown in 1974. The Shippingport station now has a light-water breeder reactor (LWBR) core, rated at 60 MW(e) net capacity, which went critical on Aug. 26, 1977. The station with the LWBR core installed was released for routine commercial power generation on Dec. 2, 1977. Owned by the Department of Energy, the reactor plant is scheduled to be shut down at the end of 1982.
3. This facility is regulated by the Nuclear Regulatory Commission and has been issued an operating license (or authorization) or a construction permit, or an application for same has been submitted.
4. This project is under the Power Demonstration Program.
5. In the Consolidated Edison Indian Point Station, the 615 MW(t) is increased by an oil-fired superheater to produce 265 MW(e) net.
6. The Hallam Nuclear Power Facility was shut down in September 1964 due to moderator-can failures. Entombment of the reactor was completed in 1968.
7. The last CVTR shutdown occurred Jan. 24, 1967. A license amendment issued June 14, 1967, authorizes CVNPA to possess but not operate the CVTR.
8. The dismantlement program for the Piqua Nuclear Power Facility was completed in February 1969.
9. The Pathfinder Plant has been shut down since November 1967. On Sept. 9, 1968, Northern States Power Company announced plans to install gas-fired boilers for operation the summer of 1969.
10. The Elk River Reactor was shut down due to technical problems in February 1968; in 1974, dismantling and removal of this facility was completed.
11. N Reactor, a DOE-owned reactor for production of special nuclear materials, also produces steam that is supplied to the adjacent electric generating plant, owned and operated by Washington Public Power Supply System (WPPSS). Initial electric-power generation began Apr. 8, 1966. Gross power output of 800 MW(e) utilizing N Reactor steam was achieved on Dec. 9, 1966, and gross generation of 860 MW(e) was achieved in 1972.
12. Midland Unit 1 supplies 3,625,000 pounds per hour of process steam, and Unit 2 supplies 425,000 pounds per hour.
13. This facility was originally built and operated in 1954 as the Boiling Reactor Experiment No. 2 (BORAX-2). With the addition of a turbogenerator, it operated during 1955 as BORAX-3 and on July 17, 1955, produced sufficient electricity to light and power Arco, Idaho—a U. S. first. BORAX-4, a further modification, operated from December 1956 to June 1958 when the experiment was shut down.
14. OMRE demonstrated the technical and economic feasibility of using liquid hydrocarbon terphenyls as coolant and/or moderator.
29. Ownership of this reactor was transferred to North American Rockwell in December 1971 and was redesignated the Nuclear Examination Reactor or L-85 rather than AE-6. The AE-6, also designated WBNS, was built and first operated at Downey, Calif. It was moved to Santa Susana in 1956.
30. This TRIGA reactor is capable of being pulsed and of steady-state operation.
31. The HPRR was previously operated in the Nevada BREN facility. It is now installed in the Dosimetry Applications Research Facility.
32. The KEWB reactor was operated by AI from 1956 to 1967 as the Kinetic Experiment on Water Boilers.
33. This reactor was operated in the USAEC Atoms for Peace Exhibit in Vienna, Austria, in June 1963; in Belgrade, Yugoslavia, in September 1963; in Madrid, Spain, in April 1964; in Lisbon, Portugal, in April 1965; in Utrecht, Netherlands, in March 1966; in Dublin, Ireland, in September–October 1966; Ankara, Turkey, in April–May 1967; Tehran, Iran, in November–December 1967; Taipei, Taiwan, in April–May 1968; Seoul, Korea, in September–October 1968; Manila, Philippines, in February–March 1969; and Bucharest, Romania, in October 1969. The reactor instrumentation has been shipped to Howard University, Washington, D. C., and the fuel is currently in storage at Oak Ridge pending shipment to Howard University.
34. In 1943 the Manhattan Engineer District disassembled Chicago Pile 1 and rebuilt it at Palos Park, Ill., as Chicago Pile 2. CP-2 had a thermal-power level of 10 kW.
35. This reactor was shipped abroad for exhibition purposes in the USAEC Atoms for Peace Exhibit in the Tokyo International Trade Fair in 1959, and in Cairo, Egypt, and Lahore, Pakistan, in 1960.
36. This TRIGA-Mk II was operated at the New Delhi World Agricultural Fair in 1960. It has been dismantled for storage in California by Gulf Oil Corporation.
37. In 1965 and 1966 this reactor was operated at Sandia, N. Mex., as SNARE. Prior to that time it operated at INEL as the Shield Test Pool Reactor (Susie) in the Aircraft Nuclear Propulsion Program from 1959 to 1962. It was shut down in 1966 and transferred to Louisiana State University in June 1966, where it was never assembled.
38. Until mid-1967 FRAN was operated by LLNL at the Nevada Test Site, and until 1970 it was operated in the former ML-1 reactor area at INEL. In mid-1970 it was transferred back to LLNL.
39. After the assembly and operation of this reactor in the government exhibit at Geneva in September 1958, it was dismantled and returned to ANL, where it was rebuilt as a 250-kW(t) Juggernaut.
40. The RER was previously used in the terminated Aircraft Nuclear Propulsion Program. A license authorizing Lockheed to operate the reactor as a commercial facility was issued in July 1962, and in August 1962 the USAF transferred the facility to the General Services Administration. Lockheed acquired title to the facility in March 1965.
41. This reactor was previously designated STF for SNAP Shield Test Facility.

15. The EBOR reactor experiment was terminated in December 1966 prior to the completion of construction.
16. In a trial run on Dec. 21 and 22, 1951, EBR-1 generated the world's first electric power from nuclear energy and was the first to demonstrate, in July 1953, the feasibility of breeding and the compatibility with breeding economy of sodium-potassium alloy as a liquid-metal coolant. It operated with a plutonium-bearing core (Mark IV) from November 1962 to December 1963. The reactor was decommissioned and dismantled early in 1964. The facility was dedicated as a historic landmark Aug. 26, 1966. It is open to the public June 14 to September 15 annually, beginning in 1975.
17. SRE operated at 20 MW(t) until shut down in February 1964 for modification to permit an increase in power level to 30 MW(t). On Dec. 2, 1966, deactivation of SRE was announced.
18. The EGCR project was terminated in January 1966 prior to the completion of construction.
19. EOGR construction was terminated in December 1962. The facility was mothballed prior to operation.
20. The EBWR achieved 100,000 kW(t) on Nov. 11, 1962. Operation of EBWR in the Boiling Water Program was closed out in December 1962. The reactor was used in support of the Plutonium Recycle Program and attained criticality using plutonium as its principal fuel on Sept. 22, 1965. In support of that program, it operated at power levels as high as 70,000 kW(t). Operation in that program was completed in June 1967.
21. Footnote deleted.
22. S10FS-4 operated in orbit during April-May 1965. Operation terminated unexpectedly after 43 days at power, probably owing to a sequence of failures of electrical components of the spacecraft with resulting spurious commands shutting down the reactor. An identical ground-test unit, S10FS-3, operated successfully for more than a year before being shut down in 1966.
23. Reactor was shut down in 1973 for modifications and insertion of Sodium Loop Safety Facility (SLSF) loop. Operation resumed in 1975. Dismantled in 1981 and no longer operable.
24. In August 1958 the MTR was operated with an experimental plutonium core at power levels up to 30,000 kW(t). It demonstrated the ability of plutonium fuel elements to perform satisfactorily in a high-flux research or test reactor. Operation as a test reactor was terminated on June 30, 1969, and a ²⁴⁰Pu (Phoenix) core was run in FY 1970. Reactor decommissioned in 1974.
25. The SNAPTRAN series of experiments was designed to develop, in a land-based environment, safety information on space auxiliary power reactors through excursion testing at various temperatures and rates of reactivity insertion. The destructive experiments approach the maximum credible accidents postulated for SNAP reactor systems.
26. Footnote deleted.
27. This reactor is basically the same as the SNAP-10A Transient Test Reactor No. 1 (SNAPTRAN-1) that operated at Idaho National Engineering Laboratory (INEL) from 1963-1965. It was moved from INEL to its present location in the SNAP Environmental Test Facility. It was used there to evaluate the effects of separated ¹⁵⁵Gd as a burnable poison and as a shutdown agent in the event of water immersion. It was defueled in 1971 and placed on standby. The reactor was transferred to Los Alamos, N. Mex., in 1973.
28. The BSR-2, which became operable in 1959, is a stainless-steel-UO₂ core that can be used alternately in the same facility with BSR-1 (aluminum-alloy core).
42. The APFA-III was previously operated as the KUKLA Prompt Critical Assembly at Lawrence Livermore National Laboratory at Livermore, Calif.
43. This reactor was formerly called the Latin American Demonstration Reactor and was operated initially in São Paulo, Brazil, in October 1969. It is currently in storage at Oak Ridge.
44. AGN-201-102 was operated at Oklahoma State University, Stillwater, Okla., from 1957 until transferred to Tuskegee Institute in 1972.
45. AGN-201-104 operated at the University of Akron (Ohio) from 1957 until transferred to the Georgia Institute of Technology in 1967. Operations at that facility began in 1968.
46. AGN-201-112 was operated at the University of California, Berkeley, beginning in 1957. The University of New Mexico filed an application in April 1966 for transfer and reconstruction of the reactor at a site on its campus. The reactor achieved criticality at the University of New Mexico on Oct. 7, 1966.
47. The Center for Environmental and Energy Research (formerly Puerto Rico Nuclear Center).
48. The University of Wisconsin reactor has been modified for 1000-kW steady-state operation with a TRIGA-type core. Power level was 250 kW prior to modification in 1967.
49. The Nuclear Science Center Reactor at Texas A&M University has been modified for 1000-kW steady-state operation with a TRIGA-type core. Power level was 100 kW prior to modification in 1968.
50. In 1967 the original MTR-type core of the Washington State University reactor was replaced by a modified TRIGA-type core and control system, and the steady-state power level was increased from 100 to 1000 kW(t).
51. From 1955 to 1965 the Penn State reactor was operated as a 200-kW(t) pool-type reactor fueled with MTR-type elements.
52. The AGN-201P-103 was operated at San Ramon, Calif., by Aerojet-General Corporation from 1957 to 1966. In April 1967 Idaho State University applied for a license to operate the reactor at Pocatello, Idaho.
53. The core of the Michigan State University reactor operated in the University of Illinois TRIGA facility from 1960 until transferred in 1968.
54. California State Polytechnic College, San Luis Obispo, Calif., in December 1971 received a permit to relocate AGN-201-100 and operate it on CSPC's campus. The unit previously was operated starting in 1956 at the Naval Postgraduate School, Monterey, Calif. In 1980, AGN-201-100 was shut down and decommissioned.
55. This reactor was originally operated by North Carolina State University as the Raleigh Research Reactor (RRR). It was transferred in March 1966 to Mississippi State University for reactivation. The RRR was dismantled by N. C. State in 1963. Owing to funding problems, this reactor was never activated. Late in 1981 it was shipped to Barnwell, S. C., for disposal.
56. In 1957-1962, AGN-201M-105 was owned and operated by the National Naval Medical Center, Bethesda, Md. Title to the reactor was transferred to New York University early in 1964. A license to operate was issued in April 1967.
57. Reactors in the Army Power Program are identified by symbolic nomenclature to reflect mobility characteristics, power range, development sequence, and field operation. The first capital letter indicates mobility characteristics: S (stationary operation), not designed for subsequent relocation; P (portable), semimobile, stationary operation, capable of being dismantled and reassembled for use in successive locations; and M (mobile), capable of being moved intact, or virtually intact, for use in successive locations. The second capital letter indicates the power range as measured by design capacity for continuous operation: L (low), 100 to 1000

FOOTNOTES (Continued)

- kW(e); M (medium), 1000 to 10,000 kW(e); and H (high), 10,000 kW(e) or more. Arabic numerals indicate order in which plants having the same mobility and power characteristics are initiated. If not followed by an additional letter, the designation indicates a prototype or pilot plant. The last capital letter (when present) indicates the alphabetical order in which field plants of a specific type are initiated.
58. The MH-1A was installed in the STURGIS (formerly the Liberty Ship CHARLES H. CUGLE) at Mobile, Ala. Acceptance testing was performed at Fort Belvoir, Va., from April 1967 to June 27, 1967, when the Army accepted the plant from the Contractor. In late July 1968 the plant was deployed to Gatun Lake, Panama Canal Zone, and began producing power to the Panama Canal power grid on Oct. 5, 1968.
 59. The PM-2A was shut down on July 9, 1963, and dismantled during April-June 1964. The reactor vessel was then used at INEL for NDT (nil ductility transition temperature) investigations of materials that had been subjected to long-term irradiation. Defects were sequentially introduced into the vessel wall during a series of tests involving pressure and temperature conditions which exceeded the range permitted in operating nuclear power plants. The final test on Nov. 18, 1966, resulted in a brittle fracture under conditions even more severe than those which had been previously predicted to cause failure. The test program confirmed laboratory data on the adequacy of reactor-operating limitations to prevent brittle fracture of a pressure vessel.
 60. The Army made the determination to shut down the SM-1A because the plant's demonstration and R&D missions had been successfully completed and because of the ready availability of cheaper conventional power at the site.
 61. The abbreviations used here are defined as follows: SSN, Submarine (Nuclear Propulsion); SSBN, Fleet Ballistic Missile Submarine (Nuclear Propulsion); DLGN, Guided Missile Frigate (Nuclear Propulsion) (all DLGNs were redesignated CGN on July 1, 1975); CGN, Guided Missile Cruiser (Nuclear Propulsion); CVAN/CVN, Aircraft Carrier (Nuclear Propulsion).
 62. The USS SEAWOLF, originally commissioned with a sodium-cooled reactor in March 1957, was recommissioned with a pressurized-water reactor on Sept. 30, 1960.
 63. The USS THRESHER (SSN593) was lost in the Atlantic on Apr. 10, 1963. The USS SCORPION (SSN589) was lost in the Atlantic on May 21, 1968.
 64. The TORY IIC was successfully tested at full design power during May 1964. Subsequent to cancellation of the Pluto program on July 1, 1964, the reactor was placed in the Pluto disassembly building at NTS for storage. In 1974 the reactor was transferred to the NERVA disassembly area for disassembly.
 65. In addition to the export power reactors listed, Westinghouse provided the design and furnished nuclear components, including fuel elements, control rods, and instrumentation for the 11.5-MW(e) Belgium BR-3 pressurized-water reactor at Mol.
 66. JAERI is being rebuilt as a 90-kW(t) boiling-water research reactor (JPDR-II).
 67. This L-77 reactor was operated in the commercial exhibit of the 1958 International Conference in Geneva and in the USAEC Atoms for Peace Exhibits in Beirut, Lebanon, in October 1961; in Athens, Greece, in May 1962; and in Bangkok, Thailand, in November 1962.
 68. This is the 1955 Geneva Conference reactor rebuilt with increased power and now operating at Wuerenlingen, Switzerland.
 69. The Thai research reactor (TRR-1), built by Curtiss-Wright and started up in 1962, originally operated at 1000 kW(t). In June 1975 the TRR-1 was shut down for conversion to TRR-1/M1, a TRIGA-Mark III system adapted for pool installation. The TRR-1/M1, with a power level of 2000 kW(t)/2000 MW pulsing, was commissioned in November 1977.
 70. This TRIGA reactor was operated at the 1958 International Conference in Geneva prior to shipment to the University of Lovanium. It began operating at the University of Lovanium in June 1959. It is the first reactor to be operated on the African continent.
 71. This reactor was sold through Gulf Oil licensee, Gutehoffnungshuette Sterkrade A.E.
 72. The Netherlands research reactor was originally operated at the Amsterdam International Exhibition in June 1957; major portions of the exhibition reactor system were used to fabricate the present reactor.
 73. This reactor was operated in the International Science Section of the Brussels Informational Exhibition, Apr. 15 to Oct. 1, 1958, prior to transfer to the University of Basel.
 74. The AGN-201-111 was operated first in the USAEC Atoms for Peace Exhibit in Rome, Italy, in July 1958 and later in the commercial exhibit of the 1958 International Conference in Geneva prior to transfer to the University of Geneva.
 75. Prior to its sale to the University of Montevideo in 1966, this reactor was part of the USAEC Exhibit Program. It was in Buenos Aires, Argentina, in the fall of 1960; in Rio de Janeiro, Brazil, in the spring of 1961; in Lima, Peru, in the fall of 1961; in Mexico City in the spring of 1962; in Santiago, Chile, in the fall of 1962; in Bogotá, Colombia, in the spring of 1963; and in Montevideo, Uruguay, in the fall of 1963. The unit became operational in 1972.
 76. Zero-power experiments of historical interest previously conducted in ANL facility cells include the NAUTILUS core design (ZPR-1), the Savannah River reactor design (ZPR-2), and a series of fast-neutron studies (ZPR-4) and interactions between two basic systems (ZPR-5). The following experiments have been performed in the ZPR-7 facility: thorium, uranium, deuterium criticals (THUD), and a series of flux-trap criticals for the Argonne High Flux Research Reactor.
 77. The cell has one control panel for two pots. Experiments may be operated in either pot but not in both simultaneously.
 78. This reactor was operated at the Puerto Rico Nuclear Center from 1960 to October 1976; it was converted to the TRIGA-FLIP in 1972. It has been moved to the Neutron Radiography Facility at the National Engineering Laboratory in Idaho.
 79. The EBR-II reactor has recently become a major irradiation facility for the LMFR program.
 80. In 1977 the Annular Core Pulsed Reactor (ACPR) was shut down. After replacement of fuel and other modifications, the unit was renamed the Annular Core Research Reactor.

Reactors for Export are not included in the index (see pages 32 to 36).

Announcing the publication of

HANDBOOK ON ATMOSPHERIC DIFFUSION

Steven R. Hanna, Gary A. Briggs, and Rayford P. Hosker, Jr.
Atmospheric Turbulence and Diffusion Laboratory, National
Oceanic and Atmospheric Administration

Prepared for the Office of Health and Environmental Research,
Office of Energy Research, U. S. Department of Energy

With the Clean Air Acts and increased environmental consciousness, many engineers, consulting companies, planners, and meteorologists find themselves propelled into the work of calculating atmospheric diffusion. This book should be helpful to those who must make such problem-solving calculations of atmospheric diffusion.

Basic meteorological concepts are covered first and then plume rise, source effects, and diffusion models. Chapters on cooling tower plumes and urban diffusion are included. Suggestions are made for calculating diffusion in special situations, such as for instantaneous releases (puffs), over complex terrain, over long distances (10 km to global scales), and during times when chemical reactions or dry or wet deposition are important.

The number of pages was purposely limited to make the book more usable. A detailed index permits quick location of subject areas, and a few problems are provided after each chapter.

CONTENTS: Meteorology; Plume Rise; Source Effects; Gaussian Plume Model for Continuous Sources; Statistical Models of Diffusion from Continuous-Point Sources; Puff Diffusion; Similarity Models of Diffusion; Gradient Transport (K) Models; Urban Diffusion Models; Removal Mechanisms; Cooling Tower Plumes and Drift Deposition; Air-Pollution Meteorology in Complex Terrain; Long-Range Transport and Diffusion; Indexes.

CURRENT AWARENESS UPDATES

Published by Technical Information Center
U. S. Department of Energy

To provide complete coverage of literature related to major Department programs, announcement publications that are comprehensive in their coverage of certain energy fields are issued regularly. All information in these publications, plus additional backup information, is included in the Energy Data Base of the Technical Information Center; all references are also available for machine searching via the on-line retrieval system, DOE/RECON, and the commercial on-line retrieval systems.

Energy Abstracts for Policy Analysis (EAPA) A monthly abstract journal devoted to the analysis of energy research, conservation, and policy. Scope and coverage are limited to substantive articles or reports and emphasize the following: programmatic efforts; legislative, regulatory, and other legal aspects; social, economic, and environmental impacts; regional and sectoral analyses; institutional factors, etc. *EAPA* is available from the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402; domestic subscribers \$4.50, foreign \$5.65 per copy; annual cumulative index, domestic \$7.00, foreign \$8.75 per copy. The annual subscription price is \$48.00 for domestic subscribers and \$60.00 for foreign subscribers.

Energy Research Abstracts (ERA) A comprehensive semimonthly abstract journal devoted to all areas of energy-related information produced by the Department of Energy, other U. S. government organizations, and foreign governments. *ERA* is available to the public on a subscription basis from the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402. The subscription rate for the 24 semimonthly issues is \$150.00 for domestic subscribers and \$187.50 for foreign subscribers. A single issue costs \$6.50 (domestic) or \$8.15 (foreign).

The following **Energy Updates** are available by subscription from the National Technical Information Service (NTIS), Springfield, Virginia 22161. The annual subscription rate for one volume (calendar) year (12 issues plus cumulative index) is \$75.00 for domestic subscribers and \$150.00 for subscribers outside the United States, Canada, and Mexico. A single issue is \$7.00 (domestic) and \$14.00 (outside the United States, Canada, and Mexico).

Current Energy Patents (CEP) A monthly publication providing abstracting and indexing coverage of the international patent literature, including patent applications, that concerns any aspect of energy production, conservation, and utilization. Available as PB82-902800.

Energy and the Environment (EAE) A monthly abstract journal providing information on the impacts of energy-related activities and radioactive and nonradioactive pollutants on the environment. Available as PB82-914900.

Fossil Energy Update (FEU) A monthly abstract journal providing information on the processing and use of fossil fuels. Available as PB82-914600.

Fusion Energy Update (CFU) A monthly abstract journal providing information on controlled thermonuclear research. Available as PB82-915300.

Geothermal Energy Update (GEU) A monthly abstract journal providing information on the exploration and development of geothermal resources. Available as PB82-914700.

Solar Energy Update (SEU) A monthly abstract journal providing information on the utilization of solar energy, including biomass and tidal and wind power. Available as PB82-914500.

The following publications are also available from the National Technical Information Service. The annual rate for one volume (calendar) year (12 issues) is \$40.00 for domestic subscribers and \$80.00 for subscribers outside the United States, Canada, and Mexico.

Direct Energy Conversion (DEC) A semimonthly current awareness bulletin covering the following areas: photovoltaics, magnetohydrodynamics, electrohydrodynamics, thermoelectrics, thermionics, and fuel cells. Available as PB82-946600.

Nuclear Fuel Cycle (NFC) A semimonthly current awareness bulletin covering all aspects of the nuclear fuel cycle, both front end and back end. Available as PB82-913400.

Nuclear Reactor Safety (NRS) A semimonthly current awareness bulletin covering the following safety aspects: accident analysis, safety systems, radiation protection, decommissioning and dismantling, and security measures. Available as PB82-913500.

Radioactive Waste Management (RWM) A semimonthly current awareness bulletin covering the following management aspects: transport and storage, waste processing, waste disposal, waste storage, radioactive effluents, and shipping containers. Available as PB82-902900.

Selected Scientific and Technical Books and Monographs Published by the Technical Information Center, U. S. Department of Energy

Springfield, Virginia 22161*

- An Atlas of RF Mouse Pathology: Disease Descriptions and Incidences** (TID-26373), 1973, N. K. Clapp, \$11.25.
- Physical Mechanisms in Radiation Biology**, conference proceedings (CONF-721001), 1974, Raymond D. Cooper and Robert W. Wood, \$16.25.
- An Atlas of Radiation Histopathology** (TID-26676), 1975, David C. White, \$14.00.
- Gas Bubble Disease**, proceedings of a workshop (CONF-741033), 1976, D. H. Fickeisen and M. J. Schneider (Eds.), \$11.00.
- The Canine as a Biomedical Research Model: Immunological, Hematological, and Oncological Aspects** (DOE/TIC-10191), 1980, Moshe Shifrine and Floyd D. Wilson, \$19.00.
- Environment of the Cape Thompson Region, Alaska** (PNE-481), 1966, Norman J. Wilimovsky and John N. Wolfe (Eds.), \$9.25 per set of two volumes.
- Meteorology and Atomic Energy—1968** (TID-24190), 1968, David H. Slade (Ed.), \$19.25.
- A Tropical Rain Forest: A Study of Irradiation and Ecology at El Verde, Puerto Rico** (TID-24270), 1970, Howard T. Odum and Robert F. Pigeon (Eds.), \$49.25 per set of three volumes.
- The Enterprise, Wisconsin, Radiation Forest**
- Part 1: Preirradiation Ecological Studies** (TID-26113), 1974, Thomas D. Rudolph (Ed.), \$12.00.
- Part 2: Radioecological Studies** (TID-26113-P2), 1977, J. Zavitkovski (Ed.), \$13.50.
- Handbook on Aerosols** (TID-26608), 1976, Richard Dennis, \$11.75.
- Vascular Plants of the Nevada Test Site and Central-Southern Nevada: Ecologic and Geographic Distributions** (TID-26881), 1976, Janice C. Beatley, \$16.00.
- The Environment of Amchitka Island, Alaska** (TID-26712), 1977, Melvin L. Merritt and R. Glen Fuller (Eds.), \$25.50.
- Organization for Radiation Protection: The Operations of the ICRP and NCRP, 1928–1974** (DOE/TIC-10124), 1979, Lauriston S. Taylor, \$59.75.
- Transuranic Elements in the Environment** [DOE/TIC-22800 (Order No. DE81009809)], 1980, Wayne C. Hanson, \$26.75.
- Handbook on Atmospheric Diffusion** [DOE/TIC-11223 (Order No. DE82002045)], 1982, Steven R. Hanna, Gary A. Briggs, and Rayford P. Hosker, Jr., \$10.75.
- Radioactive Decay Data Tables: A Handbook of Decay Data for Application to Radiation Dosimetry and Radiological Assessments** (DOE/TIC-11026), 1981, David C. Kocher, \$13.75.
- Nuclear Power Reactor Instrumentation Systems Handbook**, Joseph M. Harrer and James G. Beckerley (Eds.). **Volume 1**, 1973 (TID-25952-P1), \$16.00. **Volume 2**, 1974 (TID-25952-P2), \$15.00.
- Fundamental Aspects of Nuclear Reactor Fuel Elements** (TID-26711-P1), 1976, Donald R. Olander, \$23.50. **Solutions to Problems** (TID-26711-P2), 1976, \$22.00.
- Statistical Methods in Nuclear Material Control** (TID-26298), 1973, John L. Jaech, \$18.25.
- Reactor Shielding for Nuclear Engineers** (TID-25951), 1973, N. M. Schaeffer, \$28.00.
- Nuclear Power Plant Design Analysis** (TID-26241), 1973, Alexander Sesonske, \$20.25.
- Selected Measurement Methods for Plutonium and Uranium in the Nuclear Fuel Cycle** [TID-7029 (2nd ed.)], 1972, Clement J. Rodden (Ed.), \$19.00.

A Bimonthly Technical Progress Review

NUCLEAR SAFETY

A bimonthly Technical Progress Review that is prepared for the U. S. Department of Energy by the Nuclear Safety Information Center at Oak Ridge National Laboratory. Coverage includes:

General Safety Considerations	Plant Safety Features
Accident Analysis	Environmental Effects
Control and Instrumentation	Operating Experiences

Recent Developments

Nuclear Safety digests and evaluates the latest findings on the safety aspects of reactors and the nuclear fuel cycle, including mining, fuel reprocessing, storage, and shipment. Although the journal is primarily concerned with reactor design, construction and operation, and with the effects on environment, safety and environmental considerations are included on reactor fuel fabrication, spent-fuel processing, nuclear waste disposal, and handling of radioisotopes. Also discussed are foreign reactor-safety programs, important safety-related conferences and meetings, reactor licensing actions, operating experiences, and opinions of the Advisory Committee on Reactor Safeguards.

Most articles are in-depth technical reviews of selected topics by nationally and internationally recognized authorities and are provided with extensive references. *Nuclear Safety* will be of value to reactor designers, builders, and operators and to researchers, administrators, and public-safety officials in both government and private industry.

Nuclear Safety may be purchased from the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402, at \$19.00 per year (six issues); \$4.75 additional for foreign handling. (Single copy price is \$4.00; \$1.00 additional for foreign handling.)
